[pdf]the boolean solution problem from the perspective of predicate logic

of Boolean unification in a predicate logic setting has been investigated for some formula classes, in particular for quantifier-free first-order formulas [8]. A brief discussion of Boolean reasoning in comparison with predicate logic can be found in [5]. Here we remodel the solution problem formally along with

LWB Logic Workbench. The Logic Workbench (LWB) is a set of tools for playing with logic. It is written in Clojure and comprises tools for the propositional logic, the predicate (first order) logic and the linear temporal logic. LWB has a component for natural deduction in the mentioned logics. LWB is a playground for logic and

Kluedo | how to prove higher order theorems in first order logic

In this paper we are interested in using a firstorder theorem prover to prove theorems that are formulated in some higher order logic. To this end we present translations of higher order logics into first order logic with flat sorts and equality and give a sufficient criterion for the soundness of these translations. In addition

For symbolic paradigms that use the syntax of some first-order language this appears to be particularly difficult. In this paper, we will extend on an idea proposed by Garcez and Gabbay (2004) and show how first-order logic programs can be represented by fibred neural networks. The idea is to use a neural network to
